

NOZZLE EFFECT:

With a Nozzle the smaller the area you concentrate on the higher the impact; The wider the area you impact on the lower the impact.

0° Nozzle – Maximum Impact very Low Coverage.

15° Nozzle – Impacts on 1 Brick in height, Good Impact; Fair Coverage.

25° Nozzle – Impacts on 2 Bricks in height, Low Impact; Good Coverage.

Turbo Nozzle – Utilises a 0° Jet that maximises impact.

Rotates to give coverage and has a tearing effect.

Contrary to most peoples belief that it increases pressure.
